Air Walker

CW-12

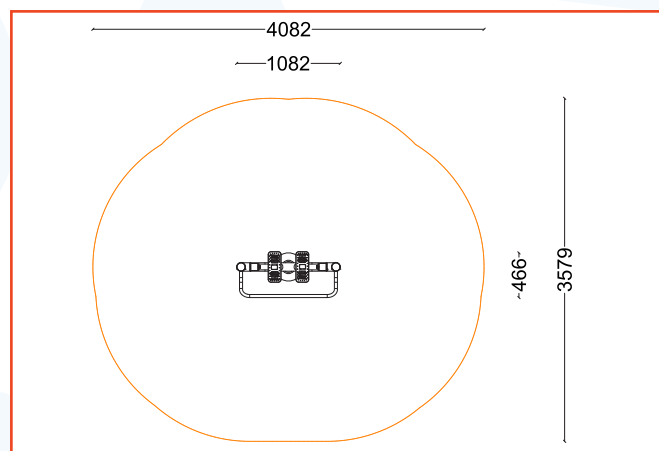

The Air Walker brings smooth, low-impact cardio exercise to any outdoor fitness space, helping users improve leg strength, hip mobility and overall endurance.

Its natural walking motion reduces stress on the joints while enhancing balance, flexibility and cardiovascular health, making it suitable for all fitness levels.

Manufactured in accordance with EN16630, this durable outdoor gym station is an excellent addition to parks, schools and community spaces promoting active, accessible lifestyles.

Materials

The main structure is manufactured from welded steel tube, forming the upright posts, moving arms, foot supports and frame. Steel provides the strength, rigidity and load-bearing performance required for outdoor fitness equipment.

The welded construction gives stability, impact resistance and long-term durability for regular public use in exposed external environments.

The steel is prepared before coating through cleaning, degreasing and rust removal. A powder-coated finish is then applied to create a smooth, hard-wearing protective layer.

This coating helps resist weathering, corrosion, surface scratches and general wear while giving the unit its green and grey appearance for outdoor use.

The black caps are typically moulded plastic or rubber components used to close tube ends and cover exposed edges or fixings. They help prevent water, dirt and debris entering the steel frame.

Caps also improve the finished appearance, reduce sharp contact points and provide a safer, cleaner detail for public-use equipment.

No safety surface required as critical fall height is less than 1000mm.

However, we suggest allowing an appropriate free space around the item in compliance with BS EN16630.
