Seatless Chest Press & Lat Pull

CW-62

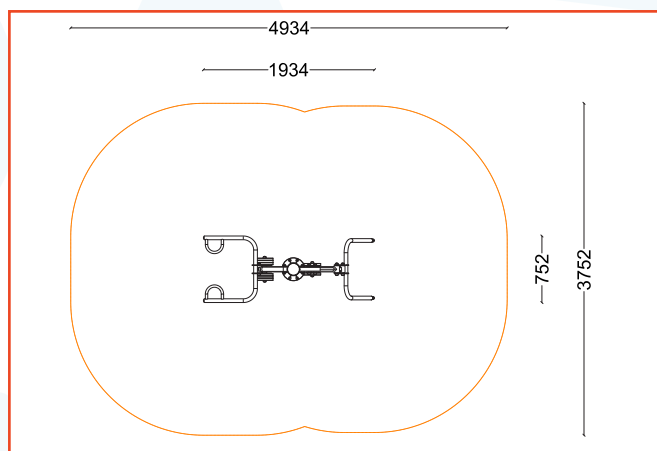

The Seatless Lat Pull & Chest Press Combi brings inclusive upper-body strength training to outdoor fitness spaces, allowing wheelchair users to exercise independently without leaving their chair.

Combining two effective resistance stations, it strengthens the chest, shoulders, back, arms and triceps while improving posture, coordination and everyday functional movement.

Manufactured in accordance with EN16630, this durable, low-maintenance fitness station is ideal for parks, schools and community spaces committed to accessible exercise for everyone.

Technical Information

Surfacing

Grass Matting

Surface Measurements

21m²

Grass Matting (Wear Area)

6m²

Wetpour

16.4m²

No safety surface required as critical fall height is less than 1000mm.

However, we suggest allowing an appropriate free space around the item in compliance with BS EN16630.

Materials

The main structure is manufactured from welded steel tube, forming the upright posts, moving arms, foot supports and frame. Steel provides the strength, rigidity and load-bearing performance required for outdoor fitness equipment.

The welded construction gives stability, impact resistance and long-term durability for regular public use in exposed external environments.

The steel is prepared before coating through cleaning, degreasing and rust removal. A powder-coated finish is then applied to create a smooth, hard-wearing protective layer.

This coating helps resist weathering, corrosion, surface scratches and general wear while giving the unit its green and grey appearance for outdoor use.

The black caps are typically moulded plastic or rubber components used to close tube ends and cover exposed edges or fixings. They help prevent water, dirt and debris entering the steel frame.

Caps also improve the finished appearance, reduce sharp contact points and provide a safer, cleaner detail for public-use equipment.

The hand grips are usually black rubber, PVC or thermoplastic sleeves fitted over the steel handles. They provide a warmer, more comfortable contact surface than painted metal.

The textured grip improves hand control, reduces slipping and supports repeated push-and-pull movement during exercise, especially in public outdoor fitness settings.
